

ABHINAV SHUKLA

Full-Stack Developer | Pune, Maharashtra, India

+91 85398 97948 | abhinavshukla9490@gmail.com | [Github](#) | [Linkedin](#)

SUMMARY

- Computer Science student graduating in 2028, with a 3-month software development internship and 3 applications I designed, coded and deployed myself.
- Work on both sides of the stack: React on the front end, Node.js and Express on the back end, MongoDB and Supabase for data.
- Carry a feature from a blank screen through to a live URL — the interface, the API calls, the database and the deploy.

EDUCATION

D. Y. Patil International University, Pune

Expected 2028

- B.Tech, Computer Science & Engineering — 4-year programme, currently in year 3 of 4.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python, SQL
- **Frontend:** React.js, HTML5, CSS3
- **Backend:** Node.js, Express.js, REST APIs, WebSockets / Socket.IO
- **Databases:** MySQL, MongoDB, Supabase (PostgreSQL)
- **Tools & Deployment:** Git, GitHub, Vercel, Firebase, Render, Postman

EXPERIENCE

Infotact Solutions — Software Development Intern

May 2026 – Aug 2026 (3 months)

- Built **OmniPOS**, a point-of-sale and inventory system covering 3 areas — sales, product catalogue and stock — writing both the screens and the queries that read and update their records.
- Developed a **food delivery and dine-out platform** — the React front end for each screen, plus the API calls that load and save its content.
- Extracted shared components used across both projects, so repeated screens did not have to be rebuilt each time.
- Traced and cleared bugs raised in internal testing, mostly stale data after an update and layouts that broke on small screens.
- Shipped work through Git branches and pull requests, each reviewed by a senior developer before merge.

PROJECTS

Synsia — Collaborative Text Editor

React, Socket.IO, MongoDB, Node.js

- Wrote an editor where several people type in one document at the same time — edits reach every open browser over **WebSockets**, with no page refresh, across 3 moving parts: React client, Socket.IO server and database.
- Fixed a bug that erased a user's work on refresh by persisting documents to **MongoDB**, then moved hosting from Cloudflare Pages to Vercel with a Google Cloud VM backend.

Aureon — Video Streaming Site

React.js, Express, Supabase

- Designed a video streaming site holding around 40 titles across 6 category rows, checked at 3 screen widths from 360px phones up to desktop.
- Added a 6-digit **OTP login** through Supabase in place of password sign-up, with accounts and session records kept there too.

VineVista — E-Commerce Store

React.js, Express, Supabase

- Launched an online store listing 30 products across 8 categories, with filtering and search over the catalogue.
- Modelled product and stock tables in **Supabase**, so prices and listings change without a new deploy.

ACHIEVEMENTS

- **2nd place out of 20 teams** — Internal Smart India Hackathon (SIH) 2025, D. Y. Patil International University.
- Planned, coded and deployed 3 applications without a team: a real-time collaborative editor, a video streaming site and an online store.
